

Boom Lift Attachments

Boom Lift Attachments - Boom lifts are machinery that has a platform which could be lowered or raised to a range of heights, thus making this piece of equipment an important necessity in a wide variety of professions. Accessible in several particular types such as aerial hoists, scissor platform lifts, and knuckle boom lifts, each version functions very specifically.

The common aerial lift adaptation is frequently utilized at ski lodges to carry people who are not comfortable with the ski lift. Effective in a manner comparable to that of an elevator, skiers are transported up the mountain in stages, stopping at stations along the way until they arrive at the peak. Aerial lifts are also used in construction, moving workers safely up and down the sides of multi-level construction sites.

Scissor hoists are also in the boom lift group. They are utilized frequently by utility providers as an ideal way to permit personnel to finish upkeep and repair on wires and cables that are attached to poles. Telephone, cable and power companies have relied on the effectiveness of this type of boom jack for years.

Knuckle boom lift trucks are made to be used in rough terrain locales where the need to be able to reverse direction is necessary. This kind of boom can fit into various tight places that a scissor lift cannot. Working amid multiple machines in a production plant or in close proximity between two walls, the knuckle boom additionally features a standard platform fitted with rails for protection and worker safety.

The kind of boom jack required by organizations will normally depend on the nature of the job required. Fortunately, there are suitable designs for practically any task.
