

## Parts for Cushion Tire Forklift

Cushion Tire Forklift Parts - Cushion tires are a firm tire with a smooth profile. Its' tread is bonded to a steel ring to be able to form the tire, and the tire is pressed onto a hub that is affixed to the lift truck. These tires are perfect to use in smooth floor warehouses and are available in various polyurethane or rubber compounds.

Consisting of polyurethane, a poly tire is a really solid tire. These kinds of tires are utilized instead of cushion tires when there is a higher load capacity than could be obtained making use of a cushion tire and those applications that require a lower steering effort. Poly tires are in a variety of hardness ratings so as to meet different individual application needs. Narrow Aisle models and Orderpicker lift trucks would usually utilize small diameter poly tires for their outrigger load wheels.
